Subject Index of Volume 29

Adsorption columns
  isothermal, scale-up effects due to near-wall channelling in: on limitations in use of plug flow models, 147
Aggregates
  of particles in flocculation with polymers, stability of, 1
Agitated reactors
  mass transfer characteristics of gases in n-hexane at elevated pressures and temperatures in, 49

Baffles
  experimental determination of optimal geometry of, for heat transfer in agitated vessel, 165
Batch distillation
  optimal control of, via nonlinear programming, 33
Binary mixtures
  containing H_2, CH_4 and CO_2 with high boiling hydrocarbons, vapour–liquid equilibria at high temperatures and pressures in: experimental equipment and results, 155
Binary systems
  extended empirical Freundlich isotherm for: modified procedure to obtain correlative constants, 133
Bubble columns
  bubble behaviour and flow structure of, 65
  effect of operating conditions on characteristics of pressure fluctuations in, 107

Channelling
  near-wall, in isothermal adsorption columns, scale-up effects due to: on limitations in use of plug flow models, 147
Concentration distribution
  of solids in slurry reactors stirred with multiple axial impellers, 27

Distillation
  batch, optimal control of, via nonlinear programming, 33
Distillation column system
  heat pump, study of, 185
Drying
  selective through, in fixed beds, 9
Dyes
  commercial, production of, via impingement-sheet mixing, 173, 179

Electrolytes and non-electrolytes
  equation of state for systems containing, 139
Extraction column
  prediction of performance of, from tracer experiments with stationary continuous phase, 39

Flocculation
  with polymers, stability of particle aggregates in, 1

 ©Elsevier Sequoia/Printed in The Netherlands

Flow structure
and bubble behaviour of bubble columns, 65
Fluidized beds
non-Newtonian fluid flow in: minimum fluidization velocity and bed expansion characteristics, 121
Freundlich isotherm
extended empirical, for binary systems: modified procedure to obtain correlative constants, 133

Heat pump distillation column system
study of, 185
Heat transfer
in agitated vessel, experimental determination of optimal geometry of baffles for, 165
in rough tubes, 117

Impellers
multiple axial, solids concentration distribution in slurry reactors stirred with, 27
Impingement-sheet mixing
production of commercial dyes via, 173, 179

Marangoni effect
(interfacial turbulence) in gas(vapour)–liquid mass transfer, evaluation of, 77, 83
Mass transfer characteristics
of gases in n-hexane at elevated pressures and temperatures in agitated reactors, 49
Mixing
axial, and Marangoni effects, modelling of packed columns accounting for, 83
impingement-sheet, production of commercial dyes via, 173, 179

Non-Newtonian fluid flow
in fluidized beds: minimum fluidization velocity and bed expansion characteristics, 121

Optimal control
of batch distillation via nonlinear programming, 33

Packed columns
irrigated, pressure drop in, 93
modelling of, accounting for axial mixing and Marangoni effects, 83
Plug flow models
on limitations in use of: scale-up effects due to near-wall channelling in isothermal adsorption columns, 147
Polymers
stability of particle aggregates in flocculation with, 1
Pressure drop
in irrigated packed columns, 93
Pressure fluctuations
in bubble column, effect of operating conditions on characteristics of, 107

Slurry reactors
stirred with multiple axial impellers, solids concentration distribution in, 27
Solids concentration distribution
in slurry reactors stirred with multiple axial impellers, 27

Through-drying
selective, in fixed beds, 9
Tubes
rough, heat transfer in, 117
Turbulence
interfacial (Marangoni effect) in gas(vapour)–liquid mass transfer, evaluation of, 77, 83

Vapour–liquid equilibria
at high temperatures and pressures in binary mixtures containing H_2, CH_4 and CO_2 with high boiling hydrocarbons: experimental equipment and results, 155
